NSRA POLICY BRIEF

National Sovereignty and Resilience Act of 2028

A self-funding, constitutionally grounded framework to restore American economic sovereignty

What America Owes You(TM) | The Sovereign Return Engine(TM)

WHAT THE NSRA DOES

The National Sovereignty and Resilience Act (NSRA) is a comprehensive federal statute that closes structural gaps in American economic sovereignty -- without deficit spending. Every dollar the bill deploys is traceable to a specific revenue mechanism built into the statute. There are no new borrowing requirements.

The NSRA operates through five coordinated pillars, each of which is viable as standalone legislation and each of which activates a distinct constituency for bipartisan support.

THE FIVE PILLARS

1. American Fiscal Integrity

Closes the offshore tax gap. Ends carried interest treatment of investment manager income. Implements OECD Pillar Two global minimum corporate tax. Eliminates the step-up in basis for large inherited estates. Projected to recover not less than $300 billion annually in revenue legally owed under existing tax law.

2. Pharmaceutical Price Parity (Schedule F)

Mandates that Americans pay no more than the G7 median price for any prescription drug sold in the United States. Automated compulsory licensing activates when manufacturers refuse to comply. Royalty schedules: 8% standard, 12% orphan drugs, 4% public health emergencies. The Congressional Budget Office has scored similar provisions at $450--$800 billion in 10-year savings.

3. Domestic Compute and Data Sovereignty

Establishes the Sovereign Compute Authority (SCA), a federal enterprise corporation organized under 31 U.S.C. ch. 91, to build and operate domestic compute infrastructure for government, defense, and critical national security functions. The SCA issues revenue bonds secured by compute lease revenue -- not backed by taxpayer credit. Explicitly prohibited from competing in consumer AI or retail cloud markets.

4. Real Estate Market Stabilization

Caps corporate single-family home acquisition at 50 units per Metropolitan Statistical Area. Mandates divestiture of holdings above the cap through a localized volume absorption filter (maximum 4.5% of MSA inventory per quarter) to prevent market flooding. 180-day pre-deprivation notice period satisfies Mathews v. Eldridge constitutional standard.

5. Sovereign Infrastructure Reinvestment Fund (SIRF)

Establishes the United States' first sovereign wealth fund, capitalized by recaptured revenue from data royalties, pharmaceutical licensing fees, compute lease income, and real estate divestiture proceeds. The 7-Subledger Math Engine(TM) ensures each revenue stream funds only its designated program category. SIRF principal is protected from General Fund transfer by a three-fifths supermajority requirement.

HOW IT PAYS FOR ITSELF

The NSRA uses a proprietary seven-subledger fiscal architecture -- The 7-Subledger Math Engine(TM) -- in which each revenue stream is earmarked to specific expenditure categories. There is no cross-subsidy between subledgers without explicit statutory authorization. Key revenue projections:

Revenue Stream	Annual Floor	Statutory Basis
OECD Pillar Two global minimum tax	$75 billion	Sec. 2411
Carbon Fee -- SIRF Energy Sovereignty Subledger	$85 billion net	Sec. 2410
Pharmaceutical compulsory licensing royalties	$40 billion	Title XIII
Data sovereignty licensing fees	$60 billion	Title XVI
Financial transaction assessment	$75 billion	Sec. 2413
Carried interest ordinary income conversion	$18 billion	Sec. 2402
Real estate divestiture proceeds	$30 billion	Title III

DUE PROCESS ARCHITECTURE

The NSRA was designed from the ground up to survive constitutional challenge. Every enforcement mechanism includes a pre-deprivation notice schedule engineered to satisfy the Mathews v. Eldridge (1976) three-factor balancing test:

* 45 days notice for financial clawbacks and penalties
* 60 days notice for operational grid power and infrastructure restrictions
* 180 days notice for corporate portfolio and asset divestments

Capital flight restrictions require a 24/7 Administrative Law Judge Judicial Verification Warrant prior to activation (Section 1601(c)). The Federal Market Integrity Administration (FMIA) -- the bill's primary enforcement authority -- must obtain independent judicial authorization before any capital lock engages.

ENERGY SOVEREIGNTY AND AFFORDABILITY

The Carbon Dividend Fee revenue is deployed entirely through the SIRF Energy Sovereignty Subledger -- not distributed as cash payments. The four-bucket deployment structure:

* 40% -- Grid Modernization Capital Grants to states, municipalities, and tribal governments for transmission infrastructure and smart grid installation
* 25% -- Rural Electric Cooperative Capitalization loans (Rural Electrification Act cooperatives serving 42 million Americans)
* 20% -- Municipal Public Power Authority Grants for rate stabilization and infrastructure hardening
* 15% -- Household Energy Affordability Credits applied directly to utility bills for households below 200% of the Federal Poverty Guideline

Veterans receive a Veterans Energy Sovereignty Benefit (VESB) -- a $100/month utility credit administered through the VA Benefits Administration -- as a first-priority obligation on the Energy Sovereignty Subledger.

INTRODUCTION STRATEGY

The NSRA is structured as five coordinated bills designed for simultaneous introduction in the 120th Congress (2027-28). Each bill is self-funding, constitutionally grounded independently, and viable as standalone legislation. This structure allows each bill to attract its own committee jurisdiction, its own cosponsors, and its own floor schedule --

while the unified NSRA framework ensures their mechanisms reinforce each other.

The pharmaceutical price parity provisions (Schedule F equivalent) have consistently polled above 70% approval across both parties. They are the bill's legislative anchor and should lead all public communications.
